ILS 24B

The ILS24B is an extremely solid built lectern that is made fully from aluminium and very strong drawer rail systems with magnetic locking to hold vibration-free a document camera on the top cover – when open or closed – or allows operation thereof from within a magnetically stabilized large side drawer.

The ILS24B offers extra-large internal ventilation capacity up to 300CFM for its 12 RU space - not available in previous models - and has a choice of configurations for the placement of the main monitor.

Pull out any of 4 cables to connect to a laptop or visualizer placed on the top cover. Operate a touch panel (Extron/Crestron) or iPad control system placed on a flexible arm over the main monitor for instant reach. (3rd party control systems are not included).

A shock-mount for a gooseneck microphone (optionally 2), microphones, audio mixer/amplifier, touch and or pen monitor, PC, matrix switchers, conferencing systems, players, transmitters etc can find a place in the 12 Rack Unit space behind lockable doors, up to 60 cm deep. (Front and back rack mounting) The cabinet may be placed on fixed feet, rollers or casters.

SPECIFICATIONS

Outer dimensions	**Closed:** 673 x 750 x 1087 mm **User side height:** 1000 mm **Open top:** 1285 x 750 x 1150 mm **Open top & drawers(keyboard):** 1742 x 750(1003) x 1087 mm **Top table:** 663 x 564 mm Top shelf extremely rigid, holds >**250 KG**

FEATURES

Top table/shelf	Extremely rigid, holds >250 KG, pull down magnet
Display	Monitor space designed for: 21.5 QOMO QIT600 using its tilt stand (front fixed)
Camera drawer	Side drawer to hold document camera: 500 x 510 x 165 mm with Electromagnetic lock for rigidity. Camera wired to be used directly inside the drawer, optionally moved to the top table
